

Dr Vladimir Milovic (FRACS) enjoys practising at Barton Private Hospital where “everything is tailored for the patient’s needs”, including recovery wards in the 5-star Medi-hotel located next door at Hotel Realm (above).

Barton Private Hospital delivers premium private hospital care

Dr Vladimir Milovic has been working at Barton Private Hospital on Sydney Avenue since it opened in 2008, and has watched it evolve from a day surgery to a high-end hospital with 5-star accommodation.

With 23 years’ experience in reconstructive and cosmetic surgery, Dr Milovic is also a Fellow of the Royal Australasian College of Surgeons (FRACS) in the specialty of plastic surgery. This makes him a highly sought-after specialist in his field. He offers a range of cosmetic surgeries in the comfort of Barton Private Hospital, including Mummy Makeover, Rhinoplasty, Breast augmentation, Breast reduction, Abdominoplasty and other reconstructive and cosmetic surgery.

Patients can expect the best ongoing care provided by Barton Private Hospital and Dr Milovic, who says he likes to remain in the patient’s life until he is satisfied that further care is not required.

By performing his surgeries at Barton Private Hospital and with the unique use of the Medi-hotel, conveniently located at the Hotel Realm next door, Dr Milovic finds that his patients benefit with no waiting time, individualised care from a team of devoted and experienced nurses, and the opportunity to recover in 5-star

accommodation with the support of a loved one at no extra cost.

“It is a unique concept,” Dr Milovic says. “It is an environment where the patient truly feels supported and special. Everything is tailored with the patient’s needs in mind and complements my approach towards patient treatment and care.”

“Working at Barton Private Hospital is great for a Plastic Surgeon like myself because I know that there is already a highly-trained and enthusiastic team in place,” he says. “They are able to recognise my needs and the needs of my patients, and surgeries are performed easily with no major issues. They are also very flexible on operating times if required. And we know from patient feedback that it is the best.”

Dr Milovic is also very excited to be able to introduce a new piece of technology that will further the advancements of Rhinoplasty surgery; this will be available in the near future exclusively in Canberra at Barton Private Hospital. “It’s a new ultrasonic instrument

that minimises bleeding and bruising, thereby promoting faster recovery,” he says. “This allows for faster remodelling and gives you beautiful control over the nasal structure. I saw this technology being currently used in Europe.”
